Supervisory Patent Examiner, Art Unit 2628		

Continuation of 11. does NOT place the application in condition for allowance because:

The Applicants argue that the information display panel presented to the user as shown in figure 1 has so much information to display that it has to be large to present all the information as it could not be presented on an HMD display and yet the viewer in the preferred embodiment as shown in figure 1 is viewing that panel through the same HMD that is also viewing the computer generated VR information.

In figure 2 of the instant application, the field of view of the image output from the VR computer and the direct optical axis scene appear to be identical and meet on element 103 so that there is no difference to the user as to where the control information is generated.

The Examiner respectfully disagrees with the Applicants as the Latham reference does present a physical control panel in the physical space (figure 1) which is viewed by the user via the HMD image capturing device as is presented in the instant application. The control panel is operable by the user and it is used to control the VR simulation as required by the instant application.

Additionally, the Applicants state, "Accordingly, the operation panel is not to be seen directly by the user, but appears in a physical space image included in the mixed reality image to be seen via the HMD by the user." which the Examiner has stated for the Latham reference.

Claims 14 and 15 relate to claim 10 as a method and a computer readable storage medium both performing the same steps as claim 10 and as such are argued as for claim 10.

The rejection of the pending claims presented in the Final Office action mailed 12/08/2009 stand as presented.
